

Macrium Reflect

MACRIUM CENTRAL MANAGEMENT CONSOLE

Endpoint backup made easy with powerful central management console

At Macrium we understand that the IT professional wants to have fast and reliable backups, but also as little administration overhead as possible. The greater the number of PCs and Servers to be backed up the greater the risk of admin overload.

The Macrium Central Management Console streamlines backup administration tasks by providing centralized management of all Macrium Reflect backup operations via intuitive workflows and an easy to use browser based tool.

The intuitive interface enables even busy administrators to rapidly deploy agents, configure backup jobs, plans and repositories, review backup results at a glance, and quickly take action to resolve any issues.

Macrium Central Management Console provides a host of features that make backup management fast and pain-free:

Managed Computers

Administrators can quickly view, browse and search for the computers on the network. Active Directory is used where possible to group and classify PCs and Servers. The easy deployment of the Macrium Agent Licenses to large numbers of endpoints, physical or virtual.

Who and What

Administrators can very quickly and easily create backup definitions including what machines and what data is to be backed up. A simple workflow guides the process, allowing flexibility and simplicity.

When and Retention

The Central Management Console allows Administrators to intuitively define schedules for backups and decide how much data they wish to retain. A wizard based workflow leads the user quickly through the process of selecting backup frequency and preferred retention plan.

Repository Management

Making sure that storage is not overwhelmed with backups is a critical part of backup administration. The Central Management Console allows configuration of repositories on the network, and very soon the cloud.

Centralized Licensing

Administrators can centrally manage legacy Macrium Reflect and new Macrium Agent Licenses for all endpoints on the network, simplifying license management and compliance and enabling users to move licenses between systems.

Easy Recovery

A straightforward wizard led process allows the recovery of disks or partitions to PCs and servers. A few clicks and then it is hands-off for recovery.

Macrium Reflect

BENEFITS

Macrium Central Management Console provides a simple and cost-effective single point of control for data protection and system recovery for organizations of all sizes. Problems can be identified at a glance, thanks to a comprehensive dashboard that provides at-a-glance overview of all backup operations.

Authorised users can securely connect and interact with Macrium Central Management Console from any PC on the network, easily back up or archive data to public cloud providers, and make backups more efficient with centralized scheduling and customizable backup templates.

Ultimately, Macrium Central Management Console helps to simplify the maintenance of backup infrastructures, centralize and co-ordinate the backup process, and improve Recovery Time Objectives (RTO).

SYSTEM REQUIREMENTS

The Central Management Console can be installed on any Windows Server or PC. SQLite is used to support the dashboard, MS MQ is utilized to manage communications between the agents and console. WMI is used to push the Macrium Agents out to the endpoints.

The Central Management Console user interface is accessed using any of the current modern browsers. Additionally, it is supported on Smart Phone or Tablet browsers for remote access.
